Beyond the Kill Switch: What Citizens Want from AI Regulation

Survey information for the Social Europe article

Stefano Sacchi, Gregorio Buzzelli

Purpose of this note

This note provides the technical survey information and exact questionnaire wording used for the Social Europe article. It is intended to help readers and editors identify the source, sampling approach, fieldwork period, analytical coding, and response options behind the figures and claims reported in the article.

Survey Project and Fieldwork

Dimension	Details
Survey project	SCOaPP-11: Societal Challenges, Public Opinion and Public Policies
Research focus	Public preferences on policy issues characterised by trade-offs, including climate change, technological innovation, and population ageing
Fieldwork period	March to May 2024
Countries covered	Denmark, Finland, France, Germany, Italy, Norway, Poland, Sweden, South Korea, the United Kingdom, and the United States
Sample size	24,493 respondents
Survey design	Designed by researchers at Politecnico di Torino, Copenhagen Business School, the University of Sussex, and the Korea Institute for Health and Social Affairs

Sampling Technique

Respondents were drawn from YouGov's panel using quota sampling. Quotas were based on age, gender, region, and education, so that national samples closely matched population distributions along these dimensions.

Questionnaire Items Used in the Article

The following sections report the full wording of the survey questions used in the article, together with response options and the recoding used for the figures where specified.

Independent Authority for AI Regulation (Figure 1)

Question: “To what extent do you agree or disagree that the development of generative AI (e.g. ChatGPT) should be monitored and regulated by an independent authority?”

Code	Response option
1	Strongly disagree
2	Disagree
3	Neither disagree nor agree
4	Agree
5	Strongly agree
977	Don't know

Figure coding: 1 for Agree or Strongly agree; 0 for Neither disagree nor agree, Disagree, or Strongly disagree.

Government Regulation of Labour Displacing Technologies (Figure 2)

Question: “There is a lot of discussion about the potential for new technologies (like AI and smart robots) to replace human labour at work. To what extent do you think governments should regulate the use of these technologies in the following circumstances?”

Variable	Scenario
q32_1	Where the technology replaces workers but increases the companies' profitability
q32_2	Where the technology replaces workers but does not increase profitability
q32_3	Where the technology replaces workers in some jobs but creates jobs for other workers in the company

Code	Response option
1	No regulation at all
2	Minimal regulation
3	Moderate regulation
4	Strong regulation

5	Very strong regulation
977	Don't know

Figure coding: 1 for Strong regulation or Very strong regulation; 0 Moderate regulation, Minimal regulation or No regulation at all.

Preferred Level of Governance

Mentioned in the article to describe preferences between national and supranational AI governance.

Question: "If an independent authority is established to monitor and regulate the development of generative AI (e.g. ChatGPT), what in your opinion should be the correct level of governance?"

Code	Response option
1	Sectoral / industry level
2	Regional / State level
3	National / Federal level
4	International level (e.g. European Union, Asia-Pacific Economic Cooperation, United States-Mexico-Canada Agreement, OECD)
5	Global level (e.g. United Nations)
977	Don't know

Self Assessed Political Ideology

Mentioned in the article in relation to the regression analysis testing drivers of preferences for AI regulation.

Question: "In politics people sometimes talk of "left" and "right". Where would you place yourself on this scale, where 0 means the left and 10 means the right?"

Code	Response option	Code	Response option
1	0 - left	8	7
2	1	9	8
3	2	10	9
4	3	11	10 - right
5	4	966	Prefer not to say
6	5	977	Don't know
7	6
